EX.No.-2.2 CREATE A 3D SOLID MODEL FROM ISOMETRIC DRAWING

AIM

To create a 3D model from the given isometric drawing using fusion 360 tool.

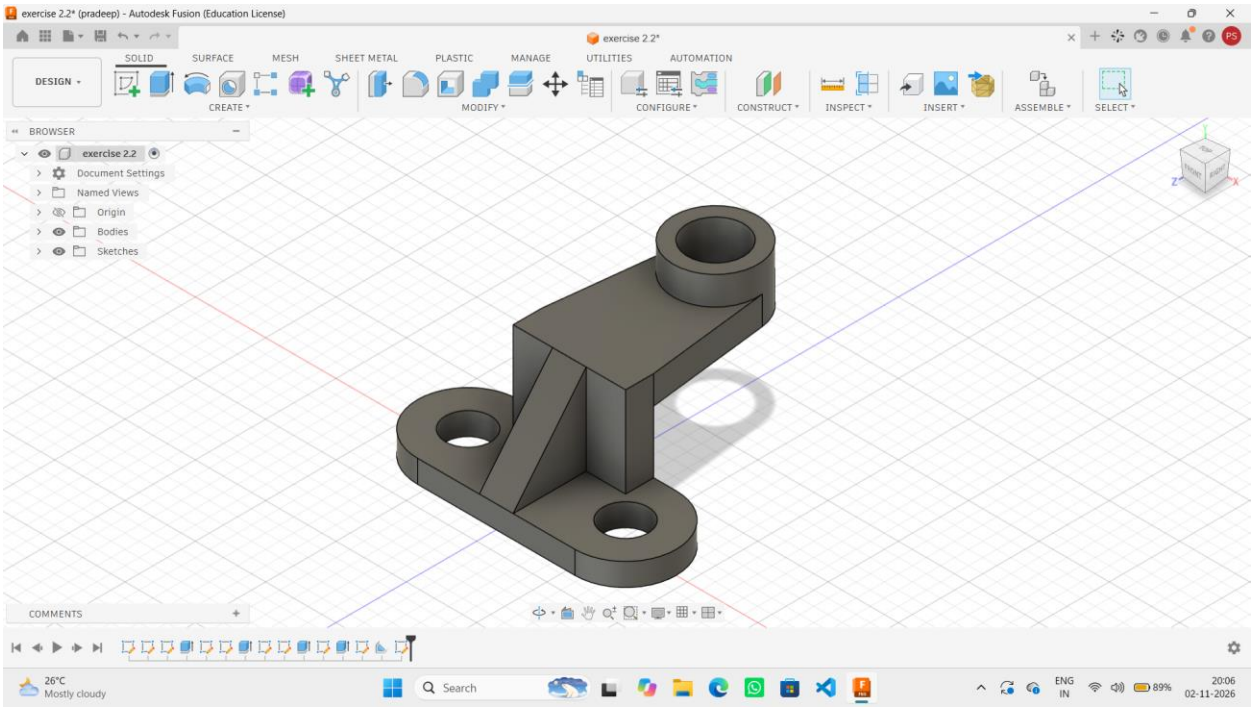

REQUIREMENTS

- *Autodesk fusion 360.*
- *Windows 10*
- *Computer or Laptop*
- *Mouse or keyboard*

PROCEDURE

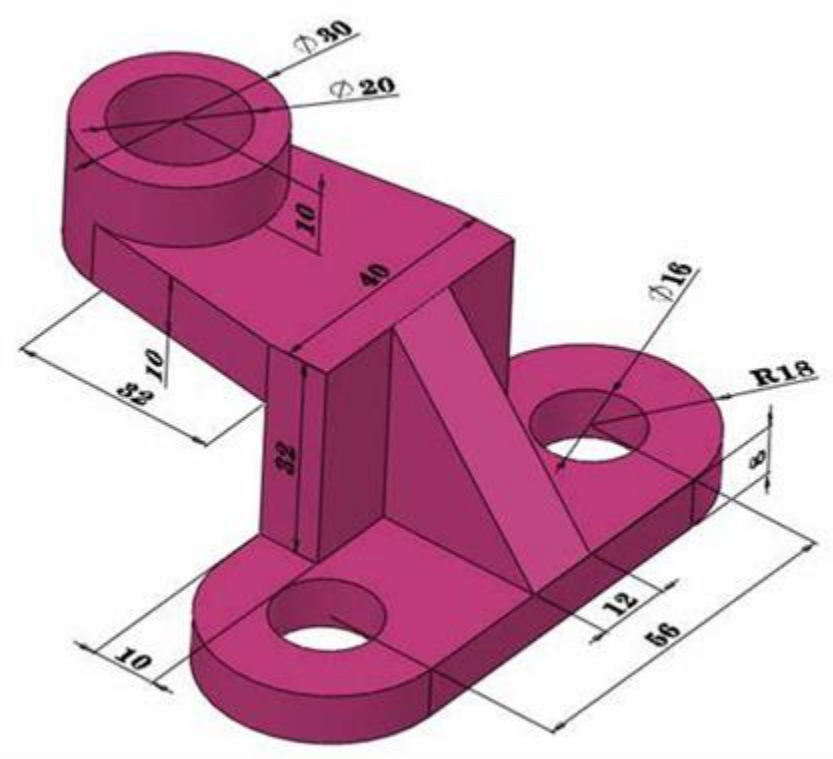

- *First, open Autodesk Fusion 360 and create a new design.*
- *Select the XY plane and draw the base plate with an overall length of 56 mm and rounded ends of radius 18mm.*
- *Draw two circular holes and a diameter of 16 mm on the base plate.*
- *Extrude the base plate to a thickness of 10 mm.*
- *Create the vertical supporting plate with a height of 28 mm.*
- *Draw the upper horizontal plate with a given length of 40 mm and thickness of 10 mm.*

- *Maintain the 32mm dimension as shown in the drawing for the upper support portion.*
- *Draw two concentric circles of diameter 30mm and 20mm on the upper plate to form the cylindrical boss.*
- *Extrude the cylindrical boss to a height of 10mm.*
- *Create the inclined supporting rib between the upper plate and the base plate.*

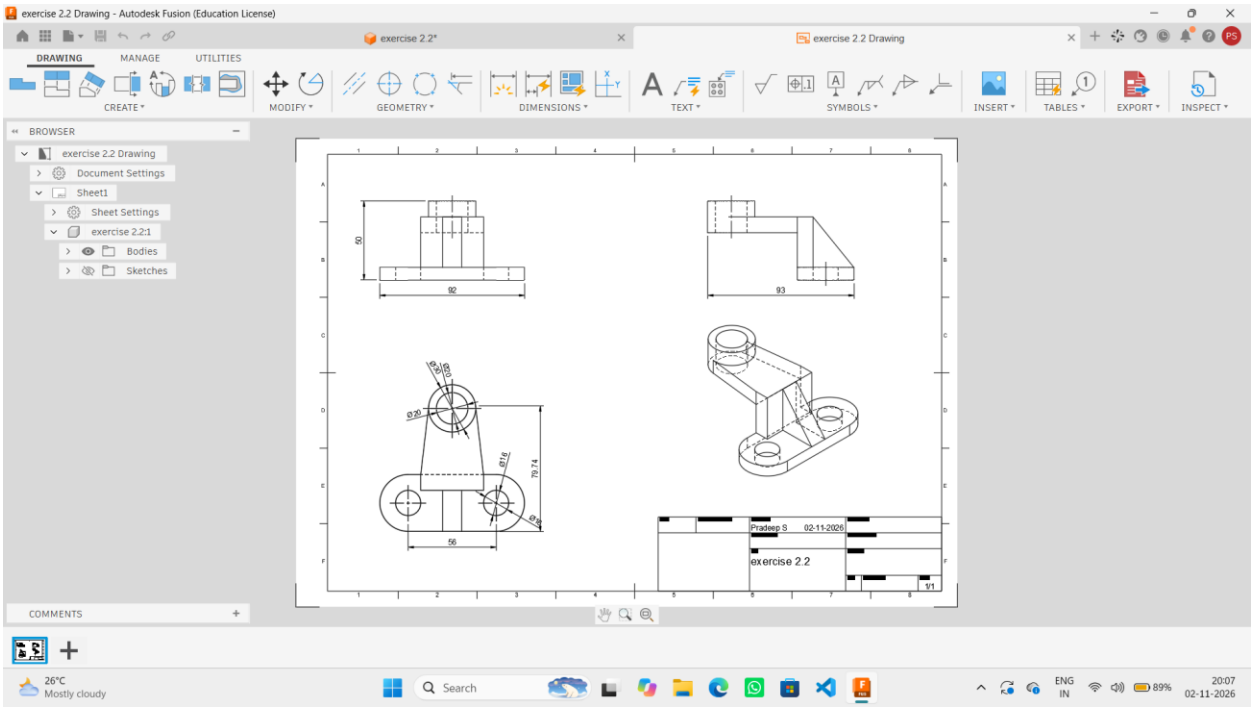

- *Finally, save the complete design.*

SKETCHES

OUTPUT

RESULT

Thus, the 3D model is created from the given isometric drawing.
